Special Item Number (SIN) Detailed Descriptions

238910 Installation and Site Preparation Services Includes installation and site preparation services ordered in conjunction with buildings and structures, building materials, storage tanks/systems, services for alternative energy solutions or power distribution equipment, and fuel dispensing and management systems purchased under this schedule contract. 246-20-3: Miscellaneous Alarm and Signal Systems. Audible/Visual Warning/Signaling Devices - Including radio alarms equipment (excluding those for vehicular use) and exit door alarm systems for security and/or fire safety.

334220 Surveillance Systems Includes surveillance systems, including video storage and services as part of a total solution.

334290 Security and Detection Systems Includes security and detection systems and devices, such as gas detectors, pressure level monitoring, patient/detainee monitoring systems, etc.

334290L Physical Access Control Systems (PACS) - Legacy SIN Includes physical access control systems (PACS), such as card-controlled access, biometrics, security barriers, etc.

334290PACS Physical Access Control Systems (PACS) - FIPS 201 Includes physical access control systems (PACS), such as card-controlled access, biometrics, security barriers, etc.

334512 Total Solution Support Products for Facilities Management Systems Includes products to support facilities management systems, such as repair parts, surveillance systems, security functions, energy functions, building comfort systems, etc. This SIN is used for ESPC contracts and the use of the DoE ENABLE Program

541330L Security System Integration, Design, Management, and Life Cycle Support Includes services involving the security integration/management discipline, which supports security products and systems throughout their lifecycle. Services may include, but are not limited to: testing, production, fielding, process improvement, disposal, etc.

541330SEC Security System Integration, Design, Management, and Life Cycle Support Includes services related to PACS design, integration, and implementation, and installation/testing. Employees of offerors of this SIN are CSEIP (Certified System Engineer ICAM PACS) certificated and such certification can be verified at IDmanagement.gov." It should read: "Includes services related to PACS design, integration, and implementation, and installation/testing. Offerors under this SIN have at least one employee who is CSEIP (Certified System Engineer ICAM PACS) certified and such certification can be verified at IDmanagement.gov.

561210SB Smart Buildings Systems Integrator Includes the comprehensive integration of building systems and technology using a non-proprietary, open architecture. Typical building systems to be integrated include: building automation, telecommunications, security, energy and environmental control, HVAC, etc.

561210FAC Facilities Maintenance and Management Includes all services related to the complete operations, maintenance and repair of federal real property. Real property could include stand-alone facilities and structures such as hospitals and federal buildings to large, multi-facility complexes such as DoD military installations. Services can be ordered individually or in combination. Typical maintenance services include: elevator, HVAC, electrical, plumbing, septic,

fire alarm/fire suppression, energy management control systems (EMCS), water distribution, septic, telephone, water tanks, renewable energy systems, waste management, recycling, etc. This SIN can also be used for facilities management solutions such as to fulfill a requirement for adequate staff/personnel to help manage federal facility operations. In addition, this SIN provides a complete array of facilities consulting and facilities assessment services.

541690E Energy Services Includes services related to energy management to include renewable energy studies and projects, energy services related training, resource efficiency management (REM) services, water conservation, building commissioning, re-commissioning and retro-commissioning, energy audits, energy consumption metering services, testing and evaluation of networked energy management systems, energy security, LEED, Green Globes, Energy Star, Energy Savings Performance Contracts (ESPC), Power Purchase Agreements, consulting on carbon emissions trading programs, renewable energy credits/certificates, greenhouse gas measurement and management, high performance sustainable buildings and sustainable design principles, resilience of Federal infrastructure and operations, energy services consulting etc.

ANCRA Ancillary Repair and Alterations Includes ancillary repair and alteration services ordered in conjunction with the delivery, or installation of products or services. These services are non-complex in nature, such as routine painting, carpeting, simple hanging of drywall, basic electrical or plumbing work, landscaping. For ordering limitations and information, refer to the Special Ordering Procedures/Ordering Guide posted on www.gsa.gov.

OLM Order-Level Materials

OLMs are supplies and/or services acquired in direct support of an individual task or delivery order placed against a Federal Supply Schedule (FSS) program contract or BPA. **OLM** pricing is not established at the FSS contract, but at the order level. Since **OLMs** are identified and acquired at the order or BPA level, the ordering contracting officer (OCO) is responsible for making a fair and reasonable price determination for all **OLMs** using FAR 15.404 techniques for commercial price determinations. Using this procedure, ancillary supplies and services that are unknown at the time of the Schedule contract award may be included and priced at the order level or BPA level. **OLM** SIN-Level Requirements/Ordering Instructions: **OLMs** are: - Purchased under the authority of the FSS Program as a special ordering procedure - Identified at the order or BPA level (either at the time the order is placed or as the requirement for **OLMs** develop during the course of performance) - Defined and priced at the ordering activity level in accordance with GSAR clause 552.238-115 Special Ordering Procedures for the Acquisition of Order-Level Materials. - Only authorized for use in direct support of another awarded SIN. - Only authorized for inclusion at the order level under a Time-and-Materials (T&M) or Labor-Hour (LH) Contract Line Item Number (CLIN) - Subject to a Not To Exceed (NTE) ceiling price limited to 33.33% of the total value of the order or BPA **OLMs** are not items awarded under ancillary supplies/services or other direct cost (ODC) SINs (these items are defined, priced, and awarded at the FSS contract level) NOTE: When used in conjunction with a Cooperative Purchasing eligible SIN, this SIN is Cooperative Purchasing Eligible.

Note 1: All SINs specifically EXCLUDE Architectural Engineering Services (A&E) under the Brooks Architect-Engineers Act as stated in Federal Acquisition Regulation (FAR) Part 36. These services shall be ordered only in accordance with Part 36 and agency procedures, and shall not be included on a contract order as an open market item.

Note 2: APPLIES WHEN SIN 334512 IS UTILIZED FOR ENERGY SAVINGS PERFORMANCE CONTRACTS ONLY -

CAPITAL LEASES MAY BE PERFORMED UNDER THIS SIN FOR A PERIOD NOT TO EXCEED 25 YEARS FOR THE SOLE PURPOSE OF ENERGY SAVINGS PERFORMANCE CONTRACTS, SUBJECT TO THE FOLLOWING CONDITIONS:

- Agencies utilizing this SIN for Energy Savings Performance Contracts are required to have obtained any required approvals under 42 USC 8287.
- Annual Energy Audits are required. The audit is required to be performed utilizing the North American Measurement and Verification Protocol. Steps in the audit process include: Baseline Verification, Post-Installation Verification, and regular Interval Post-Installation Verification. Required energy audits shall be included in the lease payment quoted by the contractor in response to the agency's scope of work.
- Terms and Conditions of the Performance Guarantee shall be specified by the contractor in their response to the agency's scope of work. This guarantee shall, at a minimum, provide that the contractor is responsible for maintenance and repair services for any energy related equipment installed under this agreement (including computer software systems). The contractor shall guarantee a minimum amount of energy savings per year. Shall the minimum savings amount not be met, the difference shall be paid to the agency within 30 days of the end of the yearly period.
- Aggregate annual payments made by an agency to both the utility and energy savings performance contract may not exceed the amount that the agency would have paid for utilities without an energy savings performance contract during the life of the agreement.
- Guaranteed savings must exceed the debt service requirements.
- If the cancellation ceiling exceeds \$10,000,000, the agency shall provide written notification to Congress in accordance with the National Energy Conservation Policy Act Requirements (42 USC 8287).
- Customer agencies shall have the right to place additional requirements within the scope of this contract in their statement of work. Any maintenance agreement performed under this provision shall be effective for the duration of the lease, unless otherwise specified by the agency in their scope of work. The agency shall obtain title to the equipment following the final lease payment
- The agency shall have the option of "buying out" the lease at any period during the lease. The buy-out amount shall be the remaining residual value.

SPECIAL PROVISIONS

This lease is for the number of years stated in the delivery order. The Government has the right to terminate this contract for convenience or default in the accordance with Federal Acquisition regulation Part 49.

In the event that the lease is terminated for lack of funding, the Government may purchase the leased equipment for the residual value within 30 days of receipt of invoice from the vendor or may elect not to purchase the leased equipment. Alternatively, if the equipment is not purchased, the Government shall permit the lessor to enter the premises and remove all or any portion of the leased equipment the lessor may choose. Any equipment not removed shall become the property of the Government.

CANCELLATION CEILING

Should the lease be completely terminated for convenience (for any reason other than the aforementioned lack of funding), the Government shall purchase the leased equipment for the residual value. The residual value shall be determined by utilizing the standard payments function on the commercially available spreadsheet program (e.g. Lotus 1-2-3, Excel, etc.) The contractor shall provide the Government a table detailing the yearly estimated residual value based on the interest rate quoted to the Government at the time of the Statement of Work.

In the event of a partial termination for convenience, the Government and the lessor shall negotiate a reasonable compensation to the lessor for the residual value of the leased equipment included in the terminated portion of the lease.

PERFORMANCE DELAYS

The Contractor shall be liable for default unless nonperformance is caused by an occurrence beyond the reasonable control of the Contractor and without its fault or negligence such as, acts of God or the public enemy, acts of the Government in either its sovereign or contractual capacity, fires, floods, epidemics, quarantine, restrictions, strikes, unusually severe weather, and delays of common carriers. The Contractor shall notify the Contracting Officer in writing as soon as it is reasonably possible after the commencement of any excusable delay, setting forth the full particulars in connection therewith, shall remedy such occurrence. Any delays caused by the Government in its contractual capacity shall be dealt with in accordance with Federal Acquisition Regulation 42.13. Notwithstanding this provision, the Contractor shall not be entitled to any adjustment in the term or price of the lease arising from delays caused by the Government unless a detailed Critical Path Method Schedule was provided to the Government at the start of the project and updated regularly by the Contractor.

ORDERING PROCEDURE

- Contractor performs feasibility analysis.*
- Contractor performs preliminary energy audit.*
- Contractor and Agency enter into agreement for the Contractor to perform a detailed energy audit. **
- Contractor shall present detailed project design, showing the proposed scope of work. In addition to the design, the Contractor shall present a proposed price for the work to be performed. The price shall consist of product prices, and labor prices (to be negotiated in accordance with GSA Schedule Contract requirements). The monthly payment shall be calculated by the Contractor utilizing the contractual rate of interest.

- Upon agreement of the price and scope of work, a delivery order shall be issued by the ordering agency.
- Upon acceptance of the work, the guarantee period shall begin.

*Agency will determine which contractor offers the best value after these two steps. No cost to the agency for these services.

**Cost of the detailed energy audit may be paid for by the agency or rolled into the lease agreement.

Labor Category Descriptions

A description of the functions, experience requirements, and educational requirements for each GSA schedule labor category is provided below. An explanation regarding experience and education equivalencies is presented at the end of this section.

Building Automation System Controls Technician (561210FAC, ANCRA, 541690E, 238910, 334290, 334512, 561210SB)

Functional Description: Responsible for programming, commissioning, troubleshooting and preventive maintenance of Building Automation Systems, which are proprietary (Metasys) to Johnson Controls. Provides solutions to systems problems by troubleshooting the system or advising others on how to resolve problems. Performs site-specific training for owner and/or building operator on how to effectively operate and maintain the system.

Minimum Experience: Three years

Minimum Education: 4 year program Vocational school or Associate degree OR Three years of industry experience and five years' experience in servicing electronic and/or mechanical systems in the HVAC industry. Trained and certified on Johnson Controls branded Metasys platform. PC experience required and the ability to program HVAC related software. Vocational school four-year program or an Associate degree in electronics, mechanical systems, computer technology, air conditioning or similar field.

Chiller Heavy Technical Specialist (561210FAC, ANCRA, 541690E, 238910, 334290, 334512, 561210SB)

Functional Description: Skilled to perform Commissioning, maintenance, and repairs on chilled water and HVAC systems. This may include split-systems, CRUs, VAVs, chillers, air handling units, pumps, exchangers, fans, cooling towers and other applied equipment. May perform a variety of advanced and complex mechanical functions associated with diagnostics and repair of machines and mechanical equipment.

Minimum Experience: Five years

Minimum Education/Licenses: High School Equivalent OR Highschool diploma or GED. Completed a HVAC apprenticeship. Trained and certified on all Johnson Controls branded proprietary equipment. Appropriate licenses to work with refrigerants, boiler, and team operational and service knowledge.

Fire Alarm Security System Technician (238910, 334512, 541330L, 541330PACS, 561210FAC, ANCRA, 238910, 561210SB, 334290)

Functional Description: Skilled to perform Inspections, testing, cleaning, repair, installation, commissioning, maintenance, and troubleshooting on addressable fire alarm systems & complex security systems. Pegasus P2000, American Dynamics, Software House, Kantech, IFC Honeywell & Simplex systems. Most of these systems are manufactured by Johnson Controls family of companies and distributed by JCI branch offices as proprietary systems. Fire Alarm Systems are microprocessor-based systems, which operate on a life safety software program. Technicians can work from the following: schematics, logic diagrams, written and verbal

descriptions, layouts, and plans. Technicians are also responsible for providing end user training. Technicians may be responsible for cable and fiber optic infrastructure removal and installation.

Minimum Experience: Five years

Minimum Education: High School OR at least 5 years of documented experience in low voltage electrical systems, including Fire/Life Safety & Complex Security Systems. Experience in reading and interpreting blueprints, submittals, and operational/product manuals. Experience with hand tools test equipment, multi-meter usage, digital analyzer, and commissioning devices. NICET trained and familiar with NFPA 72 code. Knowledge of OSHA general safety standards and the proper care and usage of Personal Protective Equipment (PPE). Appropriate licenses to work. Required Certifications: Trained and certified on Simplex, IFC Honeywell, Pegasus P2000, American Dynamics, Software House, and Kantech branded proprietary equipment.

Mechanical Heavy Technical Specialist (561210FAC, ANCRA, 541690E, 238910, 334290, 334512, 561210SB)

Functional Description: Under general direction, performs preventive maintenance inspections on mechanical, electrical, and automatic temperature control equipment to ensure continuing operation. Performs end to end testing, servicing, wiring, and monitoring for HVAC equipment and related systems at facilities. Changes belts and regular maintenance checks.

Minimum Experience: Five years

Minimum Education: High School Equivalent OR Highschool diploma or GED. Completed a HVAC apprenticeship and attained a minimum of 5 years of experience. Trained and certified on all Johnson Controls branded proprietary equipment. Knowledge of OSHA general safety standards and the proper care and usage of Personal Protective Equipment (PPE).

Project Manager (561210FAC, ANCRA, 541690E, 238910, 334290, 334512, 561210SB)

Functional Description: Serves as the authorized technical interface with the client. Oversees design, procurement, installation, integration, testing, training, and document preparation efforts. Must be proficient in all of JCI's product offerings including any proprietary product lines. Basic responsibilities include ensuring appropriate staffing required for projects; Managing and tracking project finances; Interfacing with contract management personnel; Leading the project by outlining, assigning, and coordinating work; Responsible for staffing and managing all site resources. This includes training on the latest Government Regulations, Government Processes, and employee development as required to execute project. Identifies resources and technical competencies needed to provide the scope of services described above for large and complex government sites. Establishes standards and procedures for all site-based activities. Continuously evaluates resource requirements and advises the team on capacity issues. Experience of successful management and leadership with emphasis on Federal government construction and facility management.

Minimum Experience: Three years

Minimum Education: Bachelors degree or equivalent. 3 - 6 years related experience or equivalent combination of education and experience. Trained and certified on all Johnson Controls branded proprietary equipment. This includes HVAC, Security, Building Automation, and Fire Alarm branded equipment. Knowledge of OSHA general safety standards and the proper care and usage of Personal Protective Equipment (PPE). Appropriate licenses to work with refrigerants, boiler, and team operational and service knowledge.

Experience and Education Equivalencies

With regard to equivalent experience in place of a degree, one year of relevant experience may be substituted for each year of educational experience. For example, the following years of experience are deemed to be equivalent to the following degrees:

- 2 years of relevant experience is equivalent to an associate's degree
- 4 years of relevant experience is equivalent to a bachelor's degree

With regard to educational degrees, the following equivalencies apply:

- A Professional Engineer (PE) certification is equivalent to a bachelor's degree in engineering.
- An industry recognized apprentice craft training program is equivalent to an associate's degree for an electronics technician.
- A DOD-sponsored technical training school apprentice program is equivalent to an associate's degree.
- Completion of a Military Class A and/or B school is equivalent to an associate's degree.

With regard to additional equivalent experience for an advanced degree, the following equivalencies apply:
Positions requiring a high school diploma:

- An associate's degree is equivalent to 2 years of experience
- A bachelor's degree is equivalent to 4 years of experience
- A master's degree is equivalent to an additional 2 years of experience

Positions requiring an associate's degree:

- A bachelor's degree is equivalent to 2 years of experience
- A master's degree is equivalent to an additional 2 years of experience

Positions requiring a bachelor's degree:

- A master's degree is equivalent to 2 years of experience

Johnson Controls YORK® Equipment
FOB Origin (Factory)

Volume III - Johnson Controls Products

Johnson Controls YORK® Brand Equipment

Johnson Controls combined with YORK® heating, ventilation, air-conditioning, and refrigeration (HVAC&R) systems and solutions creates the largest global provider of integrated products, systems and services for the \$200 billion global building environment industry.

Johnson Controls/YORK® is a global leader in control systems for heating, ventilating, air conditioning (HVAC) for nonresidential buildings, and consulting services. We are represented in over 125 countries, including North America, Asia, Europe, the Middle East, Africa and Latin America and in all markets.

MaxE™ YK Centrifugal Chillers

MaxE™ YK centrifugal chillers provide the best route to real-world energy performance — the combined performance at all operating conditions, not just design. Because chillers in the real world operate nearly 99% of the time at off-design conditions, off-design performance is the major factor in energy consumption. That's why MaxE YK centrifugal chillers are engineered for maximum efficiency at both design and off-design conditions. All units are produced at an ISO 9001 registered facility. All MaxE™ YK centrifugal chillers are rated in accordance with ARI Standard 550/590 at ARI conditions.

The Air-conditioning, Heating, and Refrigeration Institute (AHRI) Chiller Certification Program endorses the validity of off-design analysis to compare chiller energy consumption. Measured with AHRI's Integrated Part Load Value (IPLV), MaxE YK centrifugal chillers are unsurpassed in energy efficiency. Equipped with an OptiSpeed™ variable-speed drive, they can reduce energy-usage ratios to new lows: 0.40, 0.30, and even 0.20 kW/TR at off-design conditions.

When a MaxE YK centrifugal chiller is equipped with an OptiSpeed drive, it incorporates advanced Adaptive Capacity Control logic, which continually optimizes chiller operation. It closely examines critical operating parameters, and then determines the most efficient way to operate. In addition, it lets you optimize your savings when using intelligent control strategies, such as chilled-water reset. Adaptive Capacity Control logic also accommodates the characteristics of the refrigerant used in the chiller — today and tomorrow.

YCAL Air-Cooled Scroll Compressor Liquid Chillers

YORK® Air-Cooled Scroll Chillers provide chilled water for all air conditioning applications using central station air handling or terminal units. They are completely self-contained and are designed for outdoor (roof or ground level) installation. Each unit includes hermetic scroll compressors, a liquid cooler, air

Controls, Metasys®, Security

cooled condenser, a charge of refrigerant R-410A, and a weather resistant microprocessor control center, all mounted on a pressed-steel base. All units are produced at an ISO 9001 registered facility. YCAL chillers are rated in accordance with ARI Standard 550/590 at ARI conditions.

The unit is pressure-tested, evacuated, and fully charged with Refrigerant-410A and includes an initial oil charge. After assembly, a complete operational test is performed with water flowing through the cooler to assure that the refrigeration circuit operates correctly.

The unit structure is heavy-gauge, galvanized steel. This galvanized steel is coated with baked-on powder paint, which, when subjected to ASTM B117 1000 hour, salt spray testing, yields a minimum ASTM 1654 rating of “6”. Corrosion resistant wire mesh panels are added to protect the condenser coil from incidental damage and restrict unauthorized access to internal components. Unit also includes service isolation valves as standard. Units are designed in accordance with NFPA 70 (National Electric Code), ASHRAE/ANSI 15 Safety code for mechanical refrigeration, ASME, Listed and labeled with Intertek Testing Services (ETL) and rated in accordance with the latest version of ARI Standard 550/590.

YLAA Air-Cooled Scroll Chillers

The YORK® YLAA air-cooled scroll chiller is an all-in-one package that is a true plug and play system that provides superb efficiency and performance. The chiller is completely self-contained and is designed for outdoor (roof or ground level) installation. An optional hydronic pump kit makes service replacement or new building installations very convenient. Each unit includes zero-ozone-depletion refrigerant (R-410A), hermetic scroll compressors, a liquid evaporator, air cooled condenser, and a weather resistant microprocessor control center, all mounted on a formed steel base. All units are produced at an ISO 9001 registered facility. YLAA chillers are rated in accordance with ARI Standard 550/590 at ARI conditions.

The unit is pressure-tested, evacuated, and fully charged with Ozone Depletion Potential Refrigerant R-410A and includes an initial oil charge. After assembly, a complete operational test is performed with water flowing through the evaporator to assure that the refrigeration circuit operates correctly.

The unit structure is heavy-gauge, galvanized steel. This galvanized steel is coated with baked-on powder paint, which, when subject to ASTM B117 1000 hour, salt spray testing, yields a minimum ASTM 1654 rating of “6”. Units are designed in accordance with NFPA 70 (National Electric Code), ASHRAE/ANSI 15 Safety code for mechanical refrigeration, ASME and rated in accordance with ARI Standard 550/590.

With the combination of R-410A refrigerant and a 30%-50% reduction of refrigerant used vs. similar chillers, this chiller provides you with the most ecologically friendly equipment. Partnered with its low sound properties (for noise pollution prevention), this chiller is a true earth-friendly offering.

Latitude™ Air-Cooled Chillers

Latitude™ chillers deliver all of the capital and installation advantages of traditional air-cooled screw chillers. And with their packaged, multi-circuit design and simple control, minimal on-site staff is

Controls, Metasys®, Security

required for maintenance and operation. All units are produced at an ISO 9001 registered facility. Latitude™ chillers are rated in accordance with ARI Standard 550/590 at ARI conditions.

What makes Latitude™ chillers unique is that they deliver real-world energy savings, which can reduce operating costs 15–25% when compared with other air-cooled screw chillers. Additionally, their sound levels at off-design conditions are so low that expensive sound-attenuation kits are often not required. Latitude chillers are the high performance, air-cooled screw chillers that deliver revolutionary advances in energy efficiency and sound levels, because, in all of today's buildings, performance matters.

Latitude chillers are designed to provide best-in-class, design efficiencies as high as 10.3 EER, which exceeds the building-energy standard of the American Society of Heating, Refrigerating and Air-conditioning Engineers (ASHRAE), known as ASHRAE 90.1. You can count on getting this outstanding level of performance, because YORK® rates and tests Latitude chillers in accordance with the Air-conditioning and Refrigeration Institute's (ARI) Standard 550/590-98.

So, factor in the low operating costs and improved sound performance with the low installed costs and low maintenance costs, and you will see that Latitude chillers deliver the lowest total cost of ownership of any air-cooled chiller. You no longer have to sacrifice operating costs to achieve low first costs. Latitude™ chillers give you the freedom to have both.

YCWL Water-Cooled Scroll Liquid Chiller

YORK® YCWL Water-Cooled chillers provide chilled water for all air conditioning applications that use central station air handling or terminal units. They are completely self-contained and are designed for indoor (new or retrofit) installation. Each unit includes hermetic scroll compressors, a liquid evaporator, water cooled condenser, and a user-friendly, Microcomputer Control Center mounted on a rugged steel base. All units are produced at an ISO 9001 registered facility. All YCWL chillers are rated in accordance with ARI Standard 550/590 at ARI conditions.

The unit will be pressure-tested, evacuated, and charged with Refrigerant-410A, and York® 'V' (POE) synthetic oil. There will be an operational test, with water flowing through the evaporator, to check that each control device operates correctly.

The unit structure is heavy-gauge, galvanized steel. This galvanized steel is coated with baked-on powder paint, which, when subjected to ASTM B117 1000 hour, salt spray testing, yields a minimum ASTM 1654 rating of "6". Corrosion resistant wire mesh panels are added to protect the condenser coil from incidental damage and restrict unauthorized access to internal components. Unit also includes service isolation valves as standard. Units are designed in accordance with NFPA 70 (National Electric Code), ASHRAE/ANSI 15 Safety code for mechanical refrigeration, ASME, Listed and labeled with Intertek Testing Services (ETL) and rated in accordance with the latest version of ARI Standard 550/590.

The chiller is engineered for maximum efficiency at both design and part-load operation by taking advantage of the colder cooling tower water temperatures which naturally occur during the winter months. Appreciable power savings are realized from these reduced heads.

Controls, Metasys®, Security

YORK® Solution® Air-Handling Units

YORK® Solution® air-handling units (AHUs) from Johnson Controls—the only names you need to know for a line that has no limits. Johnson Controls/YORK engineers have developed an AHU line that is so flexible, and able to deliver such high standards of performance, that it can handle virtually any application. Whatever the air-handling challenge—IAQ, acoustics, energy, controls, you name it—Johnson Controls/YORK® can build a Solution AHU that will meet your needs.

All units are produced at an ISO 9001 registered facility. YORK® Solution® air-handling units are rated in accordance with ARI Standard 550/590 at ARI conditions.

Solution® AHU's from Johnson Controls comprise a complete AHU line to meet commercial, institutional and industrial indoor and outdoor unit applications. For more than 50 years, YORK® air handling units have been installed in every type of facility to handle any type of requirement; manufacturing, education, healthcare, life sciences and process manufacturing.

Solution® AHU's come equipped with industry-leading Metasys® controls that are installed and commissioned at the factory. Factory installation assures superior quality, saves time on the jobsite and delivers accurate performance. Plus, you can count on seamless operation with a Metasys building management system.
